

LIKRA-San  – improves digestion

in dairy cow feeding and bull fattening

Hubert Vorkamp from Graes-Brink 47/Ahaus runs a dairy farm with 130 HF-dairy cows with two milking robots and newly built cattle pen, as well as a connected bull fattening.

He has been using mineral feed with **Likra-San** for the past 2 years. **Likra-San** specialist Wolfgang Schmeing from Landservice Rensing, Borkenwirte, took over the supervision and calculation of the rations.

experience report dairy cattle farming

ration: ½ grass silage, ½ corn silage, concentrate according to performance + 200 g mineral feed for dairy cows with **Likra-San**. Addition of β-Carotene with **carotene supplement** upon need.

- **higher feed intake**, especially on hot summer-days
- significant **improvement of udder health**: lowered the somatic cell content from 240.000 to 120.000 per ml/milk
- **increasing of the milk yield**
- **more vital dairy cows**: robust claws, hair covering, improved fertility and particularly higher rumen health

experience report bull fattening

ration: corn silage, concentrated feed, mineral feed for fattening cattle with **LIKRA-San**

- **higher feed intake** – calmer animals
- **constant feed intake**, also in hot periods
- healthy claws
- HF-fattening bulls 18 to 19 months old with an average carcass weight of 390 kg

As result of the better rumen and **animal health** overall **40% less vet costs** and an improved **conversion compared to feeding without LIKRA-San** has been achieved.
